

Project Information Sheet

Improving the Value of Care for Bronchiolitis (in an outpatient setting)

Description:

The AAP released new guidelines based on best evidence in 2014. However, there is still overutilization of bronchodilators, CXRs, steroids, and antibiotics in the management of this disease process across the continuum of care. The goal of this QI project is to Increase compliance with the AAP guidelines for patients < 1 year of age diagnosed with bronchiolitis and managed in an outpatient setting.

Leader:

Jeanann Pardue, MD, Chief Quality Officer

Target Audience and Scope of Practice:

This quality improvement project is designed for pediatricians practicing in a primary care setting.

Timeline:

Release Date: March 15, 2018, Expiration Date: Ongoing

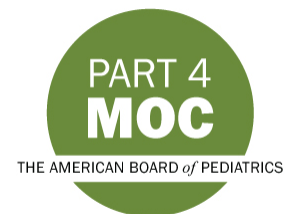

Requirements for Meaningful Participation:

1. Submit QI Project Enrollment Form.
2. Complete QI education and submit certificate.
3. Collect baseline data and at least 2 cycles of improvement data after intervention has been implemented, approximately 4-6 months.
4. Participate in chart review.
5. Plan and implement intervention(s).
