Pediatric Sleep Medicine

Sleep conditions

We treat and diagnose all sleep disorders:

- Obstructive sleep apnea (difficulty breathing while asleep, blockage of airflow)
- Central sleep apnea
- Narcolepsy
- Idiopathic Hypersomnia (excessive daytime sleepiness)
- Insomnia (difficulty sleeping at night)
- Behavioral insomnia of childhood
- Circadian rhythm sleep disorders
- Parasomnias
- Sleep talking
- Sleep walking
- Bruxism (teeth grinding)
- REM behavior disorder
- Restless leg syndrome
- Nocturnal enuresis (bed wetting)

Services we provide to newborn, pediatric and adolescent patients:

- Evaluation
- Polysomnography (sleep study)
- Multiple Sleep Latency Testing (MSLT)
- PAP titration and initiation
- Education and troubleshooting of positive airway pressure (PAP) devices
- Cognitive behavioral therapy
- Inpatient consultations available upon request
- Sound sleep screening program

The Children's Hospital Sleep Medicine Center is accredited by AASM. Our staff is expertly trained in pediatrics to make the patient and family's experience as comfortable as possible. Everything from our beds to our sensors are designed with children in mind.

Sleep disorders

Sleep disorders can be found in approximately one out of every five children. While it might seem more bothersome to parents than problematic, a sleep disorder could be an underlying reason for a serious health issue such as hyperactivity, learning disabilities or even certain types of heart disease.

No matter what the problem is with your child's sleep, the Sleep Medicine Center can evaluate the situation and make treatment recommendations that are best for the child.
