

What is a Pulmonary Function Test (PFT)?

It is a test that measures how your lungs are working.

- Your doctor will call and schedule your appointment with us.
- If you have a rescue inhaler (Bronchodilator - ex., Albuterol, Proventil, Ventolin, Proair, Xopenex) on your appointment day: **DO NOT USE - your inhaler - PLEASE BRING IT WITH YOU** to your appointment.
- Arrive 30 minutes prior to your scheduled appointment to allow for registration.
- Once you arrive to our department - we will call you back, weigh and measure your height.
- We will teach you how to blow into our machine so we can collect the information your doctor wants.
- Your test will then be read by a pulmonologist and your ordering doctor will receive your test results.
